

GATHR – Product Requirement Document (PRD)

powering seamless access to events..

Document Metadata	
Field	Details
Product Name	GATHR
Category	Event ticketing and Event infrastructure platform
Owner	Fortune Chinda
Version	1.0
Portal	www.letusgather.online

1. Overview

Product Summary

GATHR is an end-to-end event ticketing and infrastructure platform that enables event organizers to create, manage, monetize, and scale events seamlessly — from ticket sales to access control and analytics.

The platform serves event organizers, attendees, and event staff, providing a unified system for planning, selling, managing, and evaluating events.

Vision

To become the most reliable and intuitive event infrastructure platform for emerging and global markets by eliminating operational friction and improving event experiences for both organizers and attendees.

2. Problem Statement

Organizer Challenges

- Disconnected tools for ticketing, check-in, payments, and reporting
- Revenue loss due to ticket fraud and manual processes
- Lack of real-time visibility into ticket sales and attendance
- Event-day operational stress and delays

Attendee Challenges

- Fake or duplicated tickets
- Long queues during entry
- Poor access to event information and updates

3. Goals & Objectives

Goal Type	Objective	Success Metric
User	Enable organizers to manage events end-to-end	80% complete setup unaided
User	Improve attendee entry experience	Avg. check-in < 10s
Business	Achieve early PMF	500 active events in 6 months
Business	Drive adoption	10,000 tickets sold in 3 months
Business	Monetization	≥70% events generate commission

4. User Personas

Persona 1: Tunde – Independent Event Organizer

- Organizes concerts, tech events, and social gatherings
- Needs fast setup, fraud prevention, real-time insights

Persona 2: Grace – Corporate / Community Event Manager

- Manages conferences and large community events
- Needs attendance tracking, reporting, staff coordination

Persona 3: Daniel – Event Attendee

- Attends concerts, conferences, festivals
- Needs secure tickets, smooth entry, clear event details

5. User Stories

Epic: Event Creation

- As an organizer, I want to create an event quickly so I can start selling tickets immediately
- As an organizer, I want to configure multiple ticket types so I can price effectively

Epic: Ticketing & Access

- As an attendee, I want to buy tickets securely so I can trust my purchase
- As an attendee, I want a digital ticket so entry is seamless

Epic: Event Day Operations

- As an organizer, I want to scan tickets in real time to prevent fraud
- As staff, I want a simple scanning interface to reduce queues

Epic: Insights & Reporting

- As an organizer, I want real-time sales analytics
- As an organizer, I want post-event reports to evaluate performance

6. Functional Requirements

6.1 Event Setup & Management

- Event creation (title, date, venue, description)
- Event branding (banner, images)
- Ticket configuration (free, paid, tiers)
- Ticket sales limits and availability windows
- Organizer dashboard

6.2 Ticketing & Attendee Experience

- Secure online ticket purchase
- QR-code digital tickets
- Email and in-app ticket delivery
- Attendee ticket history
- Event information hub (schedule, announcements)

6.3 Event Day Infrastructure

- QR code scanning
- Offline scanning with sync
- Staff roles and permissions
- Live attendance tracking

6.4 Analytics & Reporting

- Ticket sales dashboard
- Revenue tracking
- Attendance analytics
- Downloadable reports (CSV / PDF)

6.5 Security & Reliability

- One-time QR validation
- Duplicate ticket prevention
- Encrypted user data
- Secure payment handling
- Offline fallback for check-in

7. Design & UX Requirements

Area	Requirement
Design Philosophy	Clean, fast, event-first
UX Focus	Speed, clarity, low learning curve
Branding	Bold, modern, professional
Required Screens	Event creation, ticket purchase, QR ticket, scan screen
Prototyping	Figma prototype covering full core flow

8. Technical Requirements

Architecture

- Web platform (Organizers & Attendees)
- Mobile/PWA for scanning

Tech Stack

- Frontend: React / Next.js
- Backend: Node.js
- Database: PostgreSQL / Firebase
- Payments: Paystack / Stripe
- QR Scanning: Device camera APIs

Non-Functional Requirements

- Page load < 3 seconds
- High concurrency handling
- Offline-first check-in
- Data encryption at rest & in transit

9. Go-To-Market Plan

Launch Phases

1. Internal Alpha Testing
2. Pilot with real events
3. Public Launch

Growth Channels

- Event organizer partnerships
- Community-led events
- Influencer & referral campaigns

10. Success Metrics (KPIs)

- Events created
- Tickets sold
- Check-in success rate
- Organizer retention
- Revenue per event

11. Out of Scope (MVP Exclusions)

- Seat mapping
- Event livestreaming
- Vendor/sponsor management
- White-label event pages
- AI-driven forecasting

12. Assumptions & Open Questions

Assumptions

- Organizers prefer all-in-one platforms
- Attendees trust QR-based ticketing

Open Questions

- Optimal commission pricing?
- Hardware scanners in future roadmap?
