

GATHR — (Event Ticketing & Infrastructure Platform)

powering seamless access to events..

The cleanest way to prep the UI/UX for GATHR, would be by thinking of the user type + journey. I have just detailed here the screens + what each screen must contain, for both mobile app & web.

A. Public / Marketing Screens (Before Login)

These build trust, explain value, and convert visitors.

1. Landing Page (Web) / App Intro

Purpose: Explain what GATHR is & drive sign-ups

Key UI Elements:

- Hero section (headline + CTA: Create Event / Explore Events)
- Event discovery preview (cards)
- How GATHR works (3–4 steps)
- Key benefits (Ticketing, Check-in, Analytics, Payments)
- Social proof (logos, testimonials)
- Footer (FAQs, Contact, Legal)

2. Explore / Browse Events

Purpose: Discovery without friction

Requirements:

- Event cards (image, title, date, location, price)
- Filters: category, date, location, price
- Search bar
- Featured / trending events
- Empty state (no events found)

3. Event Details Page

Purpose: Convert views to ticket purchase

Requirements:

- Event banner / cover image
- Event info (date, time, venue, map)
- Ticket types & prices
- Event description
- Organizer info
- CTA: Buy Ticket / Register
- Share event

B. Authentication Screens

Simple, fast, no drama.

4. Sign Up

- Email / Phone
- Password
- Role selection: Attendee / Organizer
- Social login (optional)

5. Login

- Email / Phone
- Password
- Forgot password

6. OTP / Verification

- Code input
- Resend option

C. Attendee (Event Goer) Screens

7. Attendee Dashboard

Purpose: Personal hub

Requirements:

- Upcoming events
- Past events
- Saved / bookmarked events
- Quick access to tickets

8. Ticket Purchase / Checkout

Purpose: Smooth payment experience

Requirements:

- Ticket summary
- Quantity selector
- Price breakdown
- Payment methods (Card, Transfer, Wallet)
- Promo code
- Confirmation CTA

9. Payment Success / Failure

- Success animation
- Ticket preview
- Download / Share ticket
- Retry payment (failure state)

10. My Tickets

Purpose: Access & validation

Requirements:

- QR code
- Ticket details
- Event info
- Offline access
- Share ticket

11. Event Check-in (Attendee View)

- QR code scanner access
- Check-in status
- Instructions

12. Profile & Settings (Attendee)

- Personal details
- Payment methods
- Notification preferences
- Help & support
- Logout

D. Organizer (Event Host) Screens

13. Organizer Dashboard

Purpose: Command center

Requirements:

- Events overview
- Ticket sales summary
- Revenue analytics
- Upcoming / live events
- Create event CTA

14. Create Event (Multi-step Flow)

Core UI Steps:

1. Event details (name, description, category)
2. Date, time & location
3. Ticket setup (free / paid / tiers)
4. Branding (banner, colors)
5. Publish / Save draft

15. Manage Event

Requirements:

- Edit event details

- Ticket inventory
- Attendee list
- Staff roles
- Event status (draft / live / closed)

16. Sales & Analytics

- Tickets sold
- Revenue
- Attendee demographics
- Download reports
- Graphs & charts

17. Check-in / Access Control (Organizer)

Purpose: Event day operations

Requirements:

- QR scanner
- Manual check-in
- Attendee validation
- Real-time count

18. Payouts & Wallet

- Earnings overview
- Withdraw funds
- Transaction history
- Bank details

19. Organizer Profile & Settings

- Organization details
- Verification
- Team members
- Notifications
- Account security

E. Admin (Optional – Web Only)

20. Admin Dashboard

- Platform analytics
- User management
- Event moderation
- Payout approvals
- Disputes & reports

F. System & Utility Screens

21. Notifications

- Ticket purchase alerts
- Event reminders
- Organizer updates

22. Help & Support

- FAQs
- Contact support
- Report issue

23. Empty States & Error Screens

- No events
- No tickets
- Network error
- 404 / Access denied

MVP Screen Priority (Starting Lean)

(MVP): Phase 1

- Landing
- Explore events
- Event details
- Auth
- Checkout
- My tickets
- Organizer dashboard
- Create event
- Check-in
